Rationale:
Asthma affects many primary school aged children and can be life-threatening. It is important therefore for all staff members to be aware of asthma, its symptoms and triggers, and the management of asthma in a school environment.

Aims:
The purpose of this policy is to manage asthma and asthma sufferers as effectively and efficiently as possible at school, and to continue to meet the requirements of Asthma Friendly Schools (AFS) accreditation.

Implementation:
- Asthma education is provided for all school staff.
- Asthma Action Plans for each student are actively encouraged and kept in a central location.
- Asthma First Aid posters are on display in staff areas, First Aid areas and the Sick Bay.
- Students with asthma are required to have their medications readily available and are safely stored at all times. These are clearly labeled with the student’s name.
- A plan is in place for managing asthma during school sporting activities, excursions and camps.
- A blue reliever puffer and spacer device are available for emergency use at school and are always taken on an excursion by class teachers in the first aid kit.
- Details of student’s asthma action plans are taken by class teacher every time a class or group of students leaves the school.
- Asthma related information is provided through the school to parents/guardians that contributes to the quality of life, health outcomes and well being for their children.
- Asthma Friendly Schools Program teaching resources are used as part of the school’s health curriculum.
- The school’s policy requires students to use a spacer device when taking their asthma medication.
- The first aid kit must include:
  - A blue reliever puffer for first aid use. Students should provide their own medication for their usual asthma management although a spacer device from the first aid kit can be used with the student's own medication.
  - A spacer device to assist with effective inhalation of the blue reliever medication.
  - Clear, written instructions on how to use these medications and devices, plus the steps to be taken in treating an acute asthma attack as described on the AFS poster.
  - 70% alcohol swabs to clean devices after use (If device cannot be disposed of).
- The school strives to minimize potential asthma triggers within the school environment.
- Blue reliever puffers are extremely safe even if the student does not have asthma therefore if a student is having difficulty breathing at school and is not known to have pre-existing asthma administer 4 separate puffs (with four breaths in between each puff) of a blue reliever puffer via a spacer and call an ambulance immediately.
Evaluation:

This policy will be reviewed as part of the school renewal process.

This policy was last ratified by the School Leadership Team in March 2014
